# UKG Pro Import Tool for Employee Data

The UKG Pro Import Tool provides data integration capabilities between UKG Pro and third-party systems. It allows you to control the flow of data from the third-party system into UKG Pro Core Web, either manually or automatically.

Integration for the specific client third-party system is supported through validation rules and data mapping features within the Import Tool. The Import Tool manages the processing of transactional updates that are generated from the third-party system.

Transaction-based files are read, transformed via the mapping rules and run through UKG Pro business processes using the Import Tool. The Import Tool processes the files on a pre-determined schedule or on-demand, as needed. File layout is based on the data requirements for the transactions within UKG Pro.

For each type of transaction, the fields that are available when you manually enter the transaction are the same fields that are available when you import the data. The fields that are required when manually entering a transaction are also required when importing the data. Validation that occurs within the business processes occurs when importing data as well.

With the Import Tool you can:

- Schedule the secure transfer of employee transaction data via UKG Pro Data Exchange Services (UDES). The UDES setup may require a Service Request.
- Determine processing frequencies (for example, daily, weekly, biweekly)
- Eliminate manual entry of data and reduce data entry errors
- Handle the following types of transactions:
  - Hires (new hires/rehires)
  - Company (FEIN) Transfers
  - Adding Global Employees
  - Global Employee Status Change (re-activate)
  - Status & Key Dates Changes
  - Terminations
  - Job and Pay Rate related updates
  - Review History
  - Work Location Changes

- Employee personal information/indicative updates
  - Name, Address or Phone
  - Private Information
  - I-9
- W-4 (Federal & State Tax) Changes
- Canada Federal & Provincial Tax Changes
- Direct Deposit Changes
- PTO Changes
- Deduction/Benefit Group changes
- Earnings Group Changes
- Deduction plan Changes (for specific types of deductions as outlined in the Deduction Changes section)
- Earnings Changes (for specific types of earnings as outlined in the Earnings Changes sections)
- Global Bank Account Changes
- Change National ID (SSN/SIN and Global)
- Time Management (UTM) Changes
- Supplemental Data Updates (include with Hires or standalone changes)
  - User-Defined Fields
  - Emergency Contacts
  - Licenses & Certifications
  - Skills
  - Previous Employment
  - Awards
  - Company Property
  - Alternate Phone
  - Additional Addresses
  - Secondary Jobs
  - Education
- Additional Data - Used to send additional fields that are not covered in any of the above transactions. This data is informational unless a secondary process, not associated with the standard import, is in place to handle it (for example, a custom table field). This is available to XML imports only.

- Platform Configuration (PC) Fields - Used to send fields that have been set up using Platform Configuration. Business processes that support platform configuration for the Import Tool are:
- New Hire/Re-Hire
  - Global New Hire
  - Status and Key Dates
  - Termination
  - Change Name, Address, or Telephone
  - Change Job
  - Contacts
  - Company Property

**Note:** Resident Tax Changes (except local PSD codes are supported) cannot be imported using the Import Tool. SmartTax can be leveraged within the integration to assist with Resident Tax default values

## Role-Based Security for the Import Tool

After the Import Tool's product key is turned on, role security must be established for a user to be able to access the Import Tool. The Import Tool menu path is: UKG Pro Menu > Administration > Integration Studio.

To enable web access rights to the Import tool:

**Navigation:** UKG Pro Menu > System Configuration > Security > Role Administration

▼ Integration Studio	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Integration Studio Dashboard		<input type="checkbox"/>

## System Setups

For this type of project, it is strongly recommended that the UKG Pro table setups have been completed before performing your analysis of the fields and requirements. Having all of the information at hand when working through the fields to determine which are needed, requirements for the fields, knowing if translations are needed and what the translations are, the table information must be available.

## Employee Key

Identifies what field will be used to identify which Employee to update. It will also be used to identify the value to use to determine if the employee already has an existing record in UKG Pro and to determine if the employee is a New Hire or a Re-hire. Available field options are:

Options	IDENTIFIER_RULE Value
Employee Number	EMPLOYEEID
Social Security Number (SSN)	SSN
National ID/SIN	NATIONALID
EEID	EEID

For all transactions, Company and Employee Key fields are required. Together, they will be used to determine which employee record to update. The Company and one of the four available Employee Keys will need to be sent.

The following are the requirements for sending Company and Employee Key. The Employee Key Identifier Rule that is sent for the transaction type will indicate which of these Employee Key fields to use. For example, if the IdentifierRule = SSN, then the fields from below that will be sent on the file for the transaction are Company and SSN. The other Employee Key fields are not included. If the IdentifierRule = Employee Number, then Company and Employee Number will be sent.

UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
Company	/Transactions/Transaction/KeyFields/CompanyCode/	char	5	Y	Y	Requires a valid UKG Pro Company Code. Codes are client configured. This field will be used with the Employee Number or SSN/SIN to know which job record to update.
Employee number	/Transactions/Transaction/KeyFields/Identifier/IF /Transactions/Transaction/Header/IdentifierRule/ = 'EMPLOYEEID'	char	9		Y	This field may be used with the Company code to know which record to update.

UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
SSN	/Transactions/Transaction/KeyFields/Identifier/ IF /Transactions/Transaction/Header/IdentifierRule/ = 'SSN'	char	9		Y	This field may be used with the Company code to know which record to update.  Format: nnnnnnnnn
SIN/National ID	/Transactions/Transaction/KeyFields/Identifier/ IF /Transactions/Transaction/Header/IdentifierRule/ = 'NATIONALID'	varchar	50		Y	Canada (CAN) and Global only  This field may be used with the Company code to know which record to update.  SIN Format: nnnnnnnnn
EEID	/Transactions/Transaction/KeyFields/Identifier/ IF /Transactions/Transaction/Header/IdentifierRule/ = 'EEID'	char	12		Y	This field may be used with the Company code to know which record to update.

## Required Fields

For each Business Process, there are fields that are available for import. Of those fields, some are required for the business process to complete. In the grids below, there is a Required column that indicates which are available and which are required. The values in the Required column are:

- A = Fields Available to import data for
- Y = Required data for record to load

For required fields, if a field value is not available to be sent, then either a default would need to be established or logic used to derive the value to be sent. If the value cannot be derived and sent, then the standard solution cannot be used. If either or both of these are needed, we can offer custom options to help address this.

If a transaction could be for an Add or a Change, the fields noted as required are for the Add transaction. A note in the transaction summary section will outline what is minimally needed for a Change transaction. For a change, the only required fields are those needed to uniquely identify what record is to be updated. Additionally, for a Change, in most cases if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

For fields that do not have a preexisting value and are not required, in most cases, if the field is not sent, it will be either set to 0 or blank based on the field type unless you have system configured rule that will override this.

General rules:

- Y/N fields: default to N if nothing is sent
- Numeric fields: default to 0 if nothing is sent

## Platform Configuration Fields

For some Business Processes, data can be imported into platform configuration fields. If the business process supports them, and the platform configuration field is a new field to be used store data (for example, it is not an existing UKG Pro Core Database field), then these are fields that are available for import. Currently, the business processes that support Platform Configuration within the Import Tool are:

- New hire
- Global new hire
- Termination
- Change Name, Address or Telephone
- Change Job
- Contacts
- Company Property
- Status and Key Dates

Platform Configuration fields have been included in the XSD for all business processes that could potentially support them for future expansion for import. Within each grid, it will designate if it is currently supported or, possibly, available for future support.

## Setting a Field to Null/Blank

To overwrite an existing field with a blank or null value, an empty tag must be sent. For example, if you an employee's middle name is 'Sam' and you needed to blank it out you would send the following <MiddleName></MiddleName>.

## Configuration Settings

These settings are configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

### Smart Tax Search

Smart Tax Search is used to automatically return recommended tax codes associated with work locations and/or employee resident addresses. This feature is used to help determine the correct payroll tax based on where an employee lives and works. With the import process it specifically updates the resident county, local resident jurisdiction, and the PSD Code. Smart Tax Search is available on these Business Processes:

- Hire/Rehire Employee
- Transfer Employee
- Change Name, Address, or Telephone

There are some instances where the query produces more than one result. In these cases, the top value will be selected, and you will be responsible for reviewing, updating and ensuring the employee is setup correctly. If the query does not provide any results, the **Address Cannot Be Located** warning message will display on the Import Process Summary page.

The Smart Tax Search service is not automatically turned on via the Import Tool. You must manually turn on the Smart Tax Search via UKG Pro Menu > System Configuration > Smart Tax Search.

The transaction types where SmartTax is available will have a rule established in the header to indicate whether to follow SmartTax or not. In addition, there will be a configuration rule where a value can be set if you want use SmartTax (TRUE) or if you don't want to use it (to bypass SmartTax if it is turned on) (FALSE or not sent).

Available options for Setting Name: SmartTax

Options	SmartTax Values
SmartTaxEnabled_NameAddress (use)	TRUE
SmartTaxEnabled_NameAddress (do not use)	FALSE (or not set)
SmartTaxEnabled_NewHire (use)	TRUE
SmartTaxEnabled_NewHire (do not use)	FALSE (or not set)
SmartTaxEnabled_TransferEmployee (use)	TRUE
SmartTaxEnabled_TransferEmployee (do not use)	FALSE (or not set)

This setting is configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

### Transfer Direct Deposits from a Prior Company

If the **DirDepsToNewCompOnFailedTransfer** configuration setting is turned on (Set = TRUE) and the employee is being transferred back into a company in which they were previously hired (employee was hired in Company A, then transferred into Company B and is now transferred back into Company A), the employee's direct deposit information will be updated as follows:

- Delete records in the transfer-to Company (Company A)
- Add the direct deposit records in the transfer-from Company (Company B) to the transfer-to Company (Company A)

This is a global configuration setting and is only available on Configuration Setting Page. It cannot be set on the record level. Available options for Setting Name: DirDepsToNewCompOnFailedTransfer

Options	DirDepsToNewCompOnFailedTransfer Values
If the employee is transferring back into a company in which they were previously hired, then delete the direct deposit records in the transfer-in company (Company A) and replace with the records from the transfer-from company (Company B).	TRUE
The direct deposit information in the transfer-in (Company A) company remains intact.	FALSE (or not set)

This setting is configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

### Transfer PTO Accruals from a Prior Company

If the **AccrualsToNewCompOnFailedTransfer** configuration setting is turned on (Set = TRUE) and the employee is being transferred back into a company in which they were previously hired (employee was hired in Company A, was transferred into Company B and is now transferred back into Company A), the employee’s PTO Accrual information will be updated as follows:

- Delete records in the transfer-to Company (Company A)
- Add the PTO Accrual records in the transfer-from Company (Company B) to the transfer-to Company (Company A)

Note that the following must be set as well:

- The configuration setting **TransferPTORule** must be set to **TRANSFERALL**. Refer to the FEIN Transfer Transaction Type for a full definition of this configuration setting.

This global configuration setting is only available on Configuration Settings page. It cannot be set on the record level. Available options for Setting Name: **AccrualsToNewCompOnFailedTransfer**

Options	AccrualsToNewCompOnFailedTransfer Values
If the employee is transferring back into a company in which they were previously hired, then delete the PTO accrual records in the transfer-in company (Company A) and replace with the records from the transfer-from company (Company B).	TRUE
The PTO accrual information in the transfer-in company (Company A) is retained.	FALSE (or not set)

This setting is configured on the UKG Pro Menu> Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

## Transfer Local Residential Taxes from a Prior Company

If the **Transferring Local Residential Taxes from a Prior Company** configuration setting is turned on (Set = TRUE) and Smart Tax is turned on, and if the employee's address does not change, the employee's existing local taxes will be pulled into the new company when performing a rehire or transfer. Note that the following must be set as well:

- Smart Tax must be turned on in UKG Pro via System Configuration > Smart Tax Search
- The SmartTax Configure Setting is enabled for the appropriate transaction type (see immediately above)
- The configuration setting 'Transferring Local Residential Taxes from a Prior Company' is turned on (Set = TRUE)

This configuration setting is only available on Configuration Setting Page. It cannot be set on the record level. Available options for Setting Name: TransferLocalResidentialTaxesFromPriorCompany

Options	TransferLocalResidentialTaxesFromPriorCompany Values
If the employee's address does not change on a rehire/transfer, then pull the existing local taxes to the new company.	TRUE
Regardless if the employee's address remains the same, run the data through SmartTax	FALSE (or not set)

If the employee's address does not change on a rehire/transfer, then pull the existing local taxes to the new company. TRUE  
Regardless if the employee's address remains the same, run the data through Smart Tax FALSE (or not set)

This setting is configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

## Transfer a Multi-Company Hired Employee back into a Prior Company

If the **AllowMultiCompanyRehireOnFailedTransfer** configuration setting is turned on (Set = TRUE) and the multi-company employee is being transferred back into a company in which they were previously hired, the employee will successfully rehire as a multi-company employee without needing to indicate this is a multi-company hire.

Example: An employee is hired in both Company A and Company B, then transfers from Company B to Company C. Now the employee is transferred from Company C back to Company B. If this rule is NOT set to 'TRUE', the transfer will fail because the employee is still active in Company A and there is no indication that this is a multi-company hire. If this rule IS set to 'TRUE', the employee will be successfully rehired back into Company B. Processing will occur as follows:

1. The transfer back to Company B will initially fail on the transfer because you 'Cannot transfer an employee to a company they've already worked in'.
2. Next, the Import Tool will terminate the employee in Company C.
3. Then the employee is rehired into Company B

This global configuration setting is only available on Configuration Settings page. It cannot be set on the record level. Available options for Setting Name: AllowMultiCompanyRehireOnFailedTransfer

Options	AllowMultiCompanyRehireOnFailedTransfer Values
If the multi-company employee is transferring back into a company in which they were previously hired, the transfer fails because you are not permitted to transfer an employee back to a company they have already worked. This setting will then allow the employee to be terminated from the company in which they are transferring from and rehire the employee into the company they previously worked. Multi-company hire status is retained.	TRUE
The transfer back into a previous company will fail.	FALSE (or not set)

This setting is configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

## Workflow Approvals

The Import Tool invokes and provides a method for inserting records directly into the Workflow tables. Data is written to these tables via the Import Tool. Once there, if Workflow approvals are setup for the business process it will follow the established workflow. If no workflow is established, it will process and update in UKG Pro.

**Note:** The only exceptions are when (1) importing a New Hire with Supplemental Data or (2) importing Supplemental Data as stand-alone (excluding Platform Configuration Fields). In these cases, imports complete automatically as the established workflow processes are automatically bypassed, and any Approval Rules included with the import are ignored. In these cases, the imports complete automatically.

Depending on your security configuration, there will be some business processes where workflow approvals are enabled and others where they are not. All Transaction types will import into the Workflow and be in the Inbox – To Do (if approvers are enabled)/Complete (if approvers are not enabled). Standard Workflow is supported, not Conditional Workflow. If conditional workflow is needed, analysis to determine if the configured approvals can be supported and custom options for addressing this can be offered.

In addition, there will be a transaction rule, by Business Process, where a header value can be sent if you want to bypass established workflow approvals.

If the Business Process has workflow approvals enabled, this setting indicates whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).

Available options for Setting Name: ApprovalRule

Options	ApprovalRule Values
Force approvals and not route through for approvals	FORCEAUTO
Follow standard configured workflow approval(s)	n/a

## Future Dating

The recommendation is to not use Future Dating and to only send changes that are effective for the period to be processed. If the future dated record is modified in the source system, the import process is not able to update or modify the future dated transaction that is already in UKG Pro. If the source system sends additional changes to that pending future dated record, this could result in a duplicate record in UKG Pro which would need to be resolved manually by an administrator.

## Effective Dating

To default the current date in your transactions, you can set the Key Field Effective Date field to the current date by entering the **#CURRENT\_DATE#** tag in the file mapping template.

**Value Mapping** → Designate the source and targets for Template - Update Employee Alternate Title (Imported: 09/23/2024 11:04 AM)

Find by  starts with

Actions

Action	Source ↑	Target	Default
×	Not in File - Apply Default Value	<input type="text" value="Key Field - Effective date"/>	<input type="text" value="#CURRENT_DATE#"/>
⊕	Company Code - position 1	<input type="text" value="Key Field - Company Code"/>	<input type="text"/> 🔍 ✕ 🗑
⊕	Employee # - position 2	<input type="text" value="Key Field - Identifier"/>	<input type="text"/>
⊕	Alternate Title - position 3	<input type="text" value="Job - Alternate job title"/>	<input type="text"/>
⊕	Effective Date - position 4	<input type="text" value="Job - Hire source"/>	<input type="text"/> 🔍 ✕ 🗑

    </JobInformation>
  </Transaction>
</Transactions>

```

If a Job/Pay change is retroactive (prior to the effective date of an already existing Job History record), the import transaction for that record will fail unless special processing is setup as noted below with the **RETROACTIVECHANGE** or **LATESTONLY** rule functionality available.

A rule will be available for the Job/Pay Change transaction type. This rule indicates if the import process should process a back dated job/pay rate change or use standard business rules and fail the record.

When an effective date is in the past AND is earlier than another job change that already exists, there are two options to handle the job change:

Available options for Setting Name: JobEffectiveRule

Options	JobEffectiveRule Values
<p>Allows for a process that changes the imported effective date so the record will process. The following will occur:</p> <ul style="list-style-type: none"> <li>• New record is inserted to job history using the “Refresh Data” functionality</li> <li>• Recent job history records are overwritten with updated data</li> <li>• Employee's current job record is updated</li> </ul>	RETROACTIVECHANGE

<p><b>Note:</b> Before inserting a retroactive record, consider the following:</p> <ul style="list-style-type: none"> <li>• Retroactive effective date must fall within <b>two years of the current date</b></li> <li>• Retroactive changes <b>cannot</b> be entered if dated <b>prior</b> to employee’s most recent <b>hire or re-hire record</b></li> <li>• Retroactive changes affect employee’s <b>current job and salary record</b></li> </ul>	
<p>Allows for a process that changes the imported effective date so the record will process. The following will occur:</p> <ul style="list-style-type: none"> <li>• Change the Effective Date of the record to the max history date that currently exists (to avoid the validation error).</li> </ul> <p><b>Note:</b> If a job/position change occurs where the effective date in the record is automatically modified because either the <b>JOBEFFECTIVE_RULE</b> of <b>LATESTONLY</b> has been set, the message column on the Results page will now display the following: <b>“Job History Effective Date changed to MM/DD/YYYY.”</b> Where MM/DD/YYYY is the new effective date established by the Import Tool.</p>	LATESTONLY

### Employee Deduction Setup Dates

When adding a new deduction to an employee, several dates must be provided:

- Deduction Start Date
- Eligibility Date (if deduction is a benefit)
- Coverage Start Date (if deduction is a benefit)

A rule is available for the Deduction Changes transaction type. When turned on, this automatically populates the above-mentioned date fields based upon the deduction code setup in UKG Pro Core (plan must be setup correctly or the import will fail). By default, this setting is turned on (Set to TRUE). If this setting is turned off (Set to FALSE), then the dates must be provided in the file or the record will produce an error.

Available options for Setting Name: Deductions\_UseDedSetupDates

Options	Deductions_UseDedSetupDates Values
Required Date fields will be automatically populated based upon the deduction code setup.	TRUE
Required date fields must be included in the file	FALSE

This setting is configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

### Effective Dating Specific to Employee Deduction Changes Import

A rule is available for the Deduction Changes transaction type which controls the effective dating for employee deductions. When this effective dating rule is turned on (Set to TRUE), all new/add records will become effective based on the date provided. If this is an update to an existing deduction, the import will update the record that is effective on that date. This setting is turned on by default. If this setting is turned off (Set to FALSE), the current record is always updated.

Available Options for Setting Name: UseEffectiveDating\_Deductions Value

Options	UseEffectiveDating_Deductions Values
Deduction will become effective based on the date provided	TRUE
Current Deduction record is updated	FALSE

This setting is configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

### Foreign Address Handling

For employees hired in the US, foreign addresses are not supported. There are two options to handle the address:

Available Options for Setting Name: ForeignAddressRule

Options	ForeignAddressRule Values
Set employee resident address to same as the employee's company address	USECOMPANYADDR

If using this rule, employee address information still must be sent otherwise the transaction will fail.	
Set employee resident address to same as the employee's company address and once employee is in UKG Pro, run an address change for them with the address provided from file. The address change will bypass workflow approvals if enabled.	USECOMPANYADDRPOSTUPDATE

This setting is configured on the UKG Pro Menu > Administration > Integration Studio > Import Tool > Configurations > Configuration Settings page.

## Translations Page

Basic Source field to UKG Pro field value translations are supported for fields that are in the business rules with code setup tables (for example, the field is a drop-down list with options for selection).

**Navigation:** UKG Pro Menu > Administration > Integration Studio > Import Tool > Translations

Administrative web pages are available for you to manage and maintain the mappings. This includes translations for most of the fields listed in the grids for the business processes below. In the grids, look for the Code Table Validation column which contains a Y.

Example of a source field with a code to an UKG Pro code translation:

- Job code in source = 123 but related field in UKG Pro = ABC

If translation is not needed or the functionality is not available, the UKG Pro code value is expected to be sent on the file.

Translations that are more than the basic field to field translation or requires logic to derive field values is not included. If either or both are needed, we can offer custom options to help address this.

## Translation Summary

Find by  starts with

Description ▲	Has Translations	Description To Code ▼
<a href="#">Additional Address - Country</a>	<input type="checkbox"/>	<input type="checkbox"/>
<a href="#">Additional Address - State</a>	<input type="checkbox"/>	<input type="checkbox"/>
<a href="#">Additional Address - Type Code</a>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<a href="#">Alternate Phone - Country Code</a>	<input type="checkbox"/>	<input type="checkbox"/>
<a href="#">Alternate Phone - Type</a>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<a href="#">Benefit Change reason</a>	<input type="checkbox"/>	<input type="checkbox"/>
<a href="#">Company Property - ID</a>	<input type="checkbox"/>	<input type="checkbox"/>
<a href="#">Contacts - Address Country</a>	<input type="checkbox"/>	<input type="checkbox"/>
<a href="#">Contacts - Gender</a>	<input type="checkbox"/>	<input type="checkbox"/>
<a href="#">Contacts - Name Suffix</a>	<input type="checkbox"/>	<input type="checkbox"/>

1 / 13

Records per page 10

If the source field is a description which must translate to an UKG Pro description, then check the **Description to Code** box. When the box is checked and **Save** is selected, all existing code translations will be deleted.

Example of a source field with a description to an UKG Pro description translation:

- The Job Description in source = **Benefits Manager** but related description in UKG Pro = **Benefits Administrator**.
- When the imported record is processed, the UKG Pro code for the job description **Benefits Administrator** will be stored on the employee's record.

<a href="#">W</a>	WRK - Work		<input type="checkbox"/>

## File Upload Page

A file can be manually uploaded to either a Production environment or a Test environment using the Import File Upload functionality. The file will be set to the established path upon upload. When preparing a file for upload, blank lines should be omitted to reduce the risk of errors. To optimize performance, file sizes are limited to a maximum of 5MB.

**Navigation:** UKG Pro Menu > Administration > Integration Studio > Import Tool > File Upload

Imports that are configured for automation will also display in the Uploaded File History Section.

## File Upload

  
print help

**Information**

- Uploaded files are queued for processing. There will be a delay before the data starts appearing on the Import Results page. Uploading the same file more than once will result in the same data being processed multiple times.

Available File Mappings: No Selection

Upload a new file: Choose File No file chosen

2/11/2018 6:58:37 PM	<a href="#">ChangeNameAddress.csv</a>	ChangeNameAddress_2018-02-11_06-58-37-537-PM.csv	fosterj	Change Name, Address, or Telephone	Completed	
2/11/2018 6:53:27 PM	<a href="#">Add New Hire.csv</a>	Add New Hire_2018-02-11_06-53-27-337-PM.csv	fosterj	Add US Employee	Completed	
2/11/2018 6:52:47 PM	<a href="#">Add New Hire.csv</a>	Add New Hire_2018-02-11_06-52-47-319-PM.csv	fosterj	Add US Employee	Completed	
2/11/2018 6:47:16 PM	<a href="#">ChangeNameAddress.csv</a>	ChangeNameAddress.csv	fosterj	Change Name, Address, or Telephone	Completed	

The status will show the current status of the uploaded file:

- Uploaded
- Queued
- Processing
- Cancelled - you can only cancel an import that has not yet completed processing
- Completed – once in completed status, you can view the results on the Import Results page

**Note:** If an import file was in Uploaded or Queued status when cancelled, there will not be any records listed in the File Summary page for that import file.

## Configuration Settings Page

At the top of the page, email notifications can be set up to send notifications for all transactions processed or just those that have a status other than **Passed**. If entering multiple email addresses, separate each address with a semi-colon (do not add a space between the addresses). The default setting for this field is None.

The Validate Mode, when enabled, allows you to validate the records in a file without updating employee records. The Import Results page will display the Validated status if the file passes validation. If the file does not pass validation, the errors will display. The Workflow Request Details Page will display:

- A status of **Cancelled**
- The Initiator Comments will display **Imported By UltiImport Webservice (Processed in Validation Mode)**

### Note:

- When the **Validate Mode** toggle is changed, a message will display to the right indicating that you must select the **Save** button before leaving the page in order to save the changes.
- When changing the **Validate Mode** toggle to 'ON' and then the **Save** button is selected, a Warning Message will appear at the top of the page indicating that all imported files (whether from manual or automated configured imports) will be affected. These files will not post to employees' records.

Under the **Validate Mode** toggle is a display only value of the **Import Path**. The path displays the pertinent portion of the folder name (the '//us.saas/xx' portion is not displayed) where the Import Tool is expecting a file to reside when using UDES for automated file delivery. Ensure your automated files are being loaded to this path.

In the configuration grid, there are a few configuration settings for the Import Tool that are available for you to configure, as needed:

- AccrualsToNewCompOnFailedTransfer
- AllowMultiCompanyRehireOnFailedTransfer
- Approval Rule
- Deductions\_UseDedSetupDates
- DirDepsToNewCompOnFailedTransfer
- Foreign Address Rule
- Identifier Rule

- Job Effective Rule
- Perform Standard Translations
- Enable SmartTax – Name Address
- Enable SmartTax – New Hire
- Enable SmartTax – Transfer
- Transfer Deduction Rule
- TransferLocalResidentialTaxesFromPriorCompany
- Transfer PTO Rule
- Transfer Term Rule
- UseEffectiveDating\_Deductions

If the option is sent in the XML, it will supersede what is set at the global level via the Configuration Settings page (table).

The **PC Fields** link (located at the top right of the Configuration Settings page) – displays a pop-up page that lists all Platform Configuration fields that have been configured. This can be used to get the ID and Path that is needed to be passed to handle updates to these fields. The ID is used to set the PCToken and the Path is used to set the PCViewPath (Refer to the Platform Configuration Fields section of this document for more information).

The screenshot shows a web interface titled "Platform Configuration Fields". At the top right, there are icons for print, help, and close. Below the title, there is a search bar with "Find by" and "starts with" dropdowns, a search button, and a "Filtered by" indicator. Below the search bar, there is an "Actions" section with a dropdown menu and buttons for "OK", "Refresh", and "Print". The main content is a table with the following data:

Name	ID	Path	Process
PO Box	_BPOBox	root_R1SEmployeeEmployment_R2SEmployeePrimaryAddress	ChangeNameAddressAndTelephoneEdit
PO Box	_BPOBox	root_R1SEmployeeEmployment_R2SEmployeePrimaryAddress	ChangeNameAddressAndTelephoneView

The **Validate** link (located at the top right of the Configuration Settings page) - displays a pop-up page that provides the ability to validate an XML file as follows:

- imported data against the XML schema definition
- code values in the XML
- translations

This page also allows you to view the schema for a particular transaction type.

Validate

validate print help close

This page allows you to validate your import data against the XML schema definition(s). To validate code values in the XML, check the 'Validate Codes' checkbox. If you have data in your XML that requires translation, check the 'Translate' checkbox. The resultant XML (if choosing translation) may be slightly re-formatted and will show the translated values. If you want to view and/or validate sample XML, select the desired transaction type in the drop down and click 'Go'. If you want to view the schema for a particular transaction type, click the 'Show Schema Options' checkbox. An additional section will appear on the right side of the page. Select the desired transaction type and click 'Go'. To validate the XML data entered into the text box (on the left) click the 'validate' toolbar icon above.

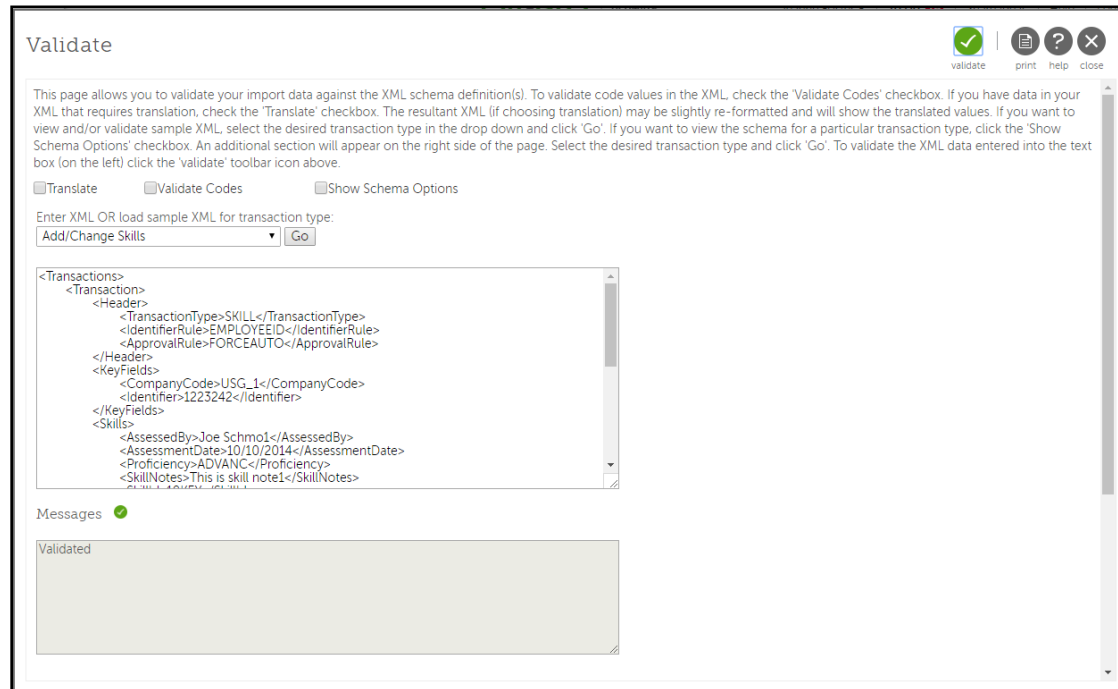

Translate    Validate Codes    Show Schema Options

Enter XML OR load sample XML for transaction type:

Add Employee   Go

You can copy your sample XML import data into the text box and select the **Validate** button on the top right side of the page. A validation message appears below the text box.

The screenshot shows a web interface titled "Validate". At the top right, there are icons for "validate" (a green checkmark), "print", "help" (a question mark), and "close" (an 'X'). Below the title bar, there is a paragraph of instructions: "This page allows you to validate your import data against the XML schema definition(s). To validate code values in the XML, check the 'Validate Codes' checkbox. If you have data in your XML that requires translation, check the 'Translate' checkbox. The resultant XML (if choosing translation) may be slightly re-formatted and will show the translated values. If you want to view and/or validate sample XML, select the desired transaction type in the drop down and click 'Go'. If you want to view the schema for a particular transaction type, click the 'Show Schema Options' checkbox. An additional section will appear on the right side of the page. Select the desired transaction type and click 'Go'. To validate the XML data entered into the text box (on the left) click the 'validate' toolbar icon above."

Below the instructions are three checkboxes: "Translate", "Validate Codes", and "Show Schema Options", all of which are currently unchecked.

Underneath, there is a label "Enter XML OR load sample XML for transaction type:" followed by a dropdown menu showing "Add/Change Skills" and a "Go" button.

The main content area contains a text box with the following XML code:

```
<Transactions>
  <Transaction>
    <Header>
      <TransactionType>SKILL</TransactionType>
      <IdentifierRule>EMPLOYEEID</IdentifierRule>
      <ApprovalRule>FORCEAUTO</ApprovalRule>
    </Header>
    <KeyFields>
      <CompanyCode>USG_1</CompanyCode>
      <Identifier>1223242</Identifier>
    </KeyFields>
    <Skills>
      <AssessedBy>Joe Schmo1</AssessedBy>
      <AssessmentDate>10/10/2014</AssessmentDate>
      <Proficiency>ADVANC</Proficiency>
      <SkillNotes>This is skill note1</SkillNotes>
    </Skills>
  </Transaction>
</Transactions>
```

Below the XML text box, there is a "Messages" section with a green checkmark icon. Underneath "Messages" is a box labeled "Validated" which is currently empty.

In the example below, an invalid company code was submitted within the XML. When the **Validate Codes** box was checked and the **Validate** button was selected at the top right side of the page, an invalid code message appears below the XML text box.

The screenshot shows a web application window titled "Validate". At the top right, there is a toolbar with icons for "validate" (a green checkmark), "print", "help" (a question mark), and "close" (an X). Below the toolbar, there is a paragraph of instructions: "This page allows you to validate your import data against the XML schema definition(s). To validate code values in the XML, check the 'Validate Codes' checkbox. If you have data in your XML that requires translation, check the 'Translate' checkbox. The resultant XML (if choosing translation) may be slightly re-formatted and will show the translated values. If you want to view and/or validate sample XML, select the desired transaction type in the drop down and click 'Go'. If you want to view the schema for a particular transaction type, click the 'Show Schema Options' checkbox. An additional section will appear on the right side of the page. Select the desired transaction type and click 'Go'. To validate the XML data entered into the text box (on the left) click the 'validate' toolbar icon above."

Below the instructions, there are three checkboxes: "Translate" (unchecked), "Validate Codes" (checked), and "Show Schema Options" (unchecked). Underneath, there is a text input field with the placeholder "Enter XML OR load sample XML for transaction type:" and a dropdown menu currently showing "Add/Change Skills". To the right of the dropdown is a "Go" button.

The main content area contains a text box with XML code. The code is as follows:

```
<Transactions>
  <Transaction>
    <Header>
      <TransactionType>SKILL</TransactionType>
      <IdentifierRule>EMPLOYEEID</IdentifierRule>
      <ApprovalRule>FORCEAUTO</ApprovalRule>
    </Header>
    <KeyFields>
      <CompanyCode>USG_X</CompanyCode>
      <Identifier>1225242</Identifier>
    </KeyFields>
    <Skills>
      <AssessedBy>Joe Schmo1</AssessedBy>
      <AssessmentDate>10/10/2014</AssessmentDate>
      <Proficiency>ADVANC</Proficiency>
      <SkillNotes>This is skill note1</SkillNotes>
    </Skills>
  </Transaction>
</Transactions>
```

The XML element `<CompanyCode>USG_X</CompanyCode>` is highlighted with a red rectangular box.

Below the XML text box, there is a "Messages" section with a yellow warning icon. It contains a message: "Transaction (1) -> Found Invalid Codes:: (Autoimport\_Company : (USG\_X))".

# File and Environment Information

<p><b>File Type/Info</b></p>	<p>File must be/include:</p> <ul style="list-style-type: none"> <li>• Changes File Only</li> <li>• One record per transaction type per employee (multiple records of the same type can be sent or differing types for the same employee)</li> <li>• All future dated changes need to be held until the pay period in which it is effective date and then pass</li> <li>• Records will be processed in the order they are received in the file.</li> </ul> <p><b>Additional Information:</b> Records per file – Multiple records can be included in one file. Records will be processed from top to bottom. Records should already be sorted in the order in which you want them processed into UKG Pro. Typically, by effective date/transaction date and transaction type.</p> <p>If one record per transaction or the transaction type cannot be provided on the file, we can offer custom options to help address this.</p> <p><b>Note:</b> The processing order of multiple files is important. Files will be processed from top to bottom. For example, Company information should be processed before Employee, Pay Group, or other information.</p>	<p><b>File Format</b></p>	<p>Flat File, Formats Supported, including:</p> <ul style="list-style-type: none"> <li>• XML             <ul style="list-style-type: none"> <li>○ XSD is the primary reference for path, node, length, required field data</li> <li>○ The order of the top-level nodes (for example, header, key fields) need to follow an order. The guide does not list them in any particular order. Reference the XSDs for order information.</li> <li>○ The node (element) is case sensitive and must match the XSD definition. Reference the XSDs for node information and validation.</li> </ul> </li> </ul> <p>XSDs will be provided for each transaction that defines the rules and requirements for the XML file upon request.</p> <p>Sample XML files for each transaction can also be provided upon request.</p> <p>Validate your XML against your XSD by selecting the Validate hyperlink on the Configuration Settings page. Your XML must comply with the XSD for that transaction type.</p> <p>The max length is provided in the XSD.</p> <ul style="list-style-type: none"> <li>• If the length of the value exceeds the length of the field, the record will fail.</li> <li>• When you are using the XSD to validate your XML and using the translation functionality and the value passed will be longer than the length denoted, you will need to modify the XSD accordingly.</li> </ul>
------------------------------	--	---------------------------	--

<p><b>Record Info</b></p>	<p>Records on the file can either be</p> <ul style="list-style-type: none"> <li>• Full record (all fields) for each transaction that have been identified as needed. All fields in the record should be populated. If a field comes over as blank tag (e.g. &lt;MiddleName&gt;&lt;/MiddleName&gt;) on the file, the field will be cleared.</li> <li>• Only those fields that have changed.</li> </ul> <p>Although, there is no limit to the number of records that can be on a file, the recommended maximum is 10,000. If there will be more than 10,000 on one file, you may want to consider splitting the file up so there are less records per file. Upon testing, you may want to adjust the number of records to something less that works best for you. We reserve the right to adjust our recommended limit at any time.</p>	<p><b>File Delivery and Path</b></p>	<p>The files can be automatically delivered to this folder from an SFTP location using the UKG Pro Data Exchange Service (UDES).</p> <p>To setup UDES, a Service Request will need to be created by the Systems Consultant or the client. The appropriate Category/Subcategory to select for the request is:</p> <p style="padding-left: 40px;">Interface Team –Automation/Scheduling-Web Custom</p> <p>The UDES project will include identifying the SFTP location, URL, Username/Password, Key, notifications, etc.</p> <p>To view the Import Path, go to the Configuration Settings page and refer to the Import Path displayed under the Validate Mode Toggle. This setting is only configurable by an administrator.</p> <p>UDES is only setup in a production environment. The File Copy Utility can be used to move the file to a Test environment. Access to this Utility will need to be granted to someone who will be responsible for obtaining the file and/or testing the import. <i>(Note that MidMarket customers may not be able to utilize the File Copy Utility.)</i></p> <p>There is also upload functionality that can be used for Production or Test. See File Upload section for more information. <i>(Note that MidMarket customers may not be able to utilize this functionality.)</i></p>
---------------------------	---	--------------------------------------	--

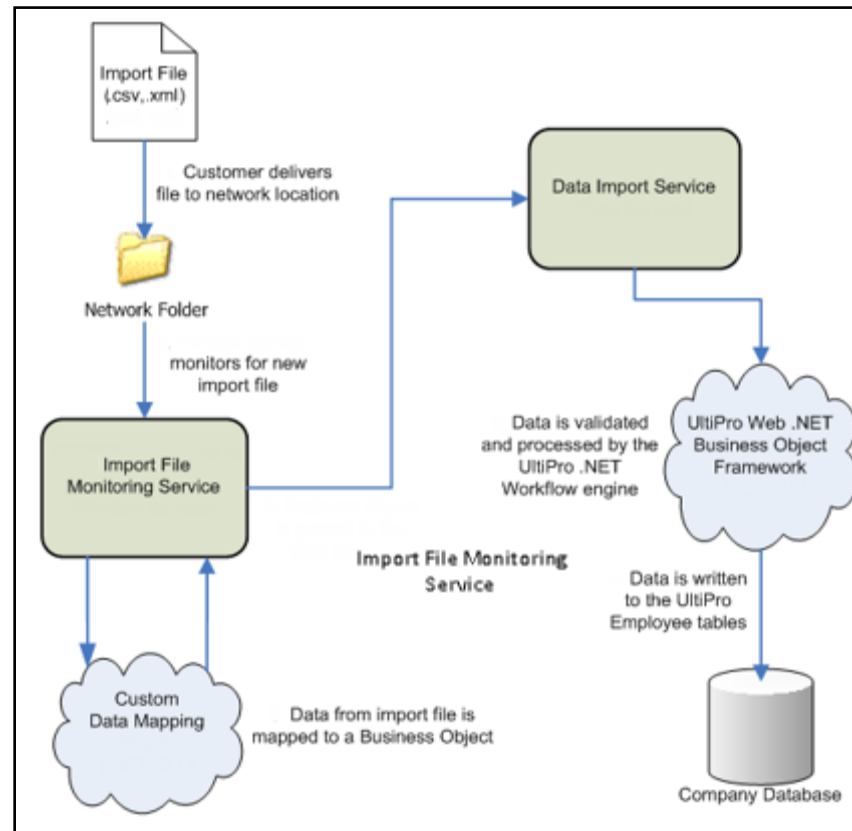

<p><b>Frequency</b></p>	<p>Scheduled – The source file can be setup/scheduled to be sent at a particular frequency. Typically, one-time per day, but can be scheduled more or less frequently as needed. No more than every 15 minutes.</p> <p>Regardless of the frequency it is sent, the import process polls the path for the file on a configurable timeframe. The standard setup is every 1 minute. As soon as it detects a file, it will process.</p>	<p><b>File Name</b></p>	<p>The standard naming convention that will be setup is:</p> <p>StandardImport_MMDDCCYYHHMMSS.xml  where MMDDCCYYHHMMSS = date/time stamp that the file is created</p> <p>However, various Name Formats can be supported. Client will need to notify assigned UDES project resource if a different file name is needed. The File name should be consistent and include a date/time stamp that the file is created.</p>
<p><b>Web Access</b></p>	<p>There are web pages used to setup, monitor and manage the import process. Access to one or more of the pages needs to be granted based on the user’s responsibility with the import via the SMC or Role/User Administration in the portal. The Client is responsible for role and user security setups.</p>	<p><b>Web Access (Pages)</b></p>	<p>The pages needed are accessible via Integration Studio, Business Rules and Workflow Administration:</p> <p>Integration Studio &gt; Import Tool:</p> <ul style="list-style-type: none"> <li>• Results: <ul style="list-style-type: none"> <li>○ Import Tool Results</li> <li>○ Results Details</li> </ul> </li> <li>• File Upload <ul style="list-style-type: none"> <li>○ Import Tool File Upload</li> <li>○ File Summary</li> </ul> </li> <li>• File Mapping</li> <li>• Translations <ul style="list-style-type: none"> <li>○ Import Tool Translations</li> <li>○ Add/Change Translations</li> </ul> </li> <li>• Configurations <ul style="list-style-type: none"> <li>○ Import Tool Configurations</li> <li>○ Validation</li> <li>○ PC Fields</li> </ul> </li> </ul>

			<p>Menu &gt; System Configuration &gt; Business Rules (can be granted by table)</p> <p>Workflow Administration</p> <ul style="list-style-type: none"> <li>• Workflow Summary</li> <li>• Request Detail</li> </ul>
<b>Notifications</b>	<p>Email notifications can be setup by on the Configuration Settings page. There are two options for the email:</p> <ul style="list-style-type: none"> <li>• All transactions that were processed</li> <li>• Transactions that have failed processing (status is not <b>Pass</b>)</li> </ul>		

## Import Tool Process Flow

The Import Tool is used to automate the import of employee data. The Import Tool performs three essential functions:

1. Monitoring
2. Data Mapping
3. Import

The Import Process

Changes are made via a third-party system. So, the same changes do not have to be entered into UKG Pro as well. Employee data can be imported directly into UKG Pro via a flat file import either automatically or on an ad hoc basis.

Import automation process details:

- The source file will be generated in the third-party system.
- The source file will be uploaded to the Import Tool Server and will be moved to the client file server. The file can also be manually placed on the client file server via the File Upload functionality or the FileCopy Utility.
- This client file server location will be monitored for the source file.
- Once the source file is located, the information is loaded first to a staging table and then into the business process(es) using the specified mapping for processing the data.
- The import will run through the Employee Administrator business process.
- Once the source file has been processed successfully, the actual source file is archived.

Summary and detail of the data imported can be viewed under Menu > Administration > Integration Studio > Import Tool > Results Page. If Workflow has been initiated, view Request Details > Inbox.

The Import Tool reads the import file and loads each employee record into a Staging Table. The **Import Results** page allows a Web User to see the summary for each employee that has an imported record in the Import Tool. The page will show the status of each record (for example, Passed, Failed, Pending, etc.). The **Import Results** page includes Filters to search for records by Date, and/or Status, Type, etc. Also, an Action option is included to export the data into either an Excel or CSV format. By selecting a record on this page, a pop-up window appears where the user can see the import details for the selected record.

The **Import Results Details** page allows a Web User to see the detail for each employee that has an imported record in the Staging Table. If corrections are needed, the user can make the change via this page and re-post. If a field is updated, it will be highlighted in yellow. Reposting can be done from either the **Import Results** page and handle multiple records at the same time or from the **Import Results Detail** page to handle just the selected transaction.

By default, the page opens with just the fields with values displaying. To show all fields included in the mapping, select **Show Empty Fields**.

The **Only Show Field Names Containing** field allows you to filter the field results based on the value entered.

By selecting the hyperlink under the **Transaction** column within the table grid on the **Import Results**, the **Request Details** page (similar to the page in Workflow Approval) will display and you can review the Before and Submitted values for the transaction.

**Note:** There are some minor differences from the actual Request Details page under Inbox, such as UKG Pro Time Management (UTM) fields may display for a New Hire transaction even though UKG Pro Time Management values are not submitted or PC fields and

Annual/Hourly/Weekly/Period rates may have been submitted, but they will not appear. In these cases, you can review all changes via Inbox > Requests.

The page shows the status of each record. The statuses without the “\*” are standard workflow statuses. The statuses marked with “\*” are specific to the import process.

Available statuses:

Status	Description
Canceled	Request is deemed no longer valid by user; workflow ends, and change request processing terminates
Contingent	Request waiting to be applied by the system (usually in future-dated requests)
Failed	Request was unsuccessful. A processing error may have occurred. The change request was not applied to the database  Final state
In progress	Request is being processed
Incomplete	Request is being edited and is not ready to be submitted
Passed	Request successfully completed; change request is applied to the database  Final state
Pending	Request is waiting for a user action to move the change request to the next workflow step or to completion
Suspended	Currently not in use
Error*	The import was submitted to the plugin, was submitted to the core framework, but no job ID is present
Queued*	It has been staged to staging table but has not yet been sent to the import plug-in
Auto-Retry	Request was re-submitted (this status will rarely occur)
Unchanged*	A transaction was submitted to the business object framework (through the ImportService) but no actual change was detected, so no job id was created
Not Submitted*	The import has been passed to the import plug-in but not yet submitted to the import service.
Validated*	In Validation Mode, the imported record passed validation checks.

The **File Summary** link, located on the top right-hand side of the page, displays a pop-up page that lists transactional information for a file. The transactional summary information includes:

- Number of records staged from file for processing
- Date submitted
- Processing time
- Business process it ran through
- Count for each transaction processed
- Status
- List any reposted records

Greenwood  
 337-PM.csv  
 Add New Hire\_2018-02-11\_06-52-47-319-PM.csv

locate Employee (18)  
 rule: EMPLOYEEID  
 any (USG\_1)  
 Job code is not valid  
 any is less than the  
 or this salary grade.

Selecting a hyperlink in either the **File Process Date** or **Service Submittal Date** columns in the grid will open the **Import Process Details** page. This page displays the values that were imported from the file and the field value as it was staged. For example, if the company code in the file were 'USG\_4', then the Field Value and Staging Value would both be 'USG\_4'. However, if a translation had been established for a skill code where 'ENG' would translate to 'DEV' when importing skills, and the import file's skill code was 'ENG'. Then, the field value column would display an 'ENG' but the staging value column for this field would be 'DEV'.

Other features on the page include being able to:

- Re-Post changes made to a field for a file that has errored out
- Show Empty Fields
- Filter Fields on the page using the 'Only Show Field Names Containing' search box.
- Show Additional Information which includes the XML of the Imported vs Translated Data values and displaying the original data in record.

# Business Processes and Transaction Types

New Hires, Re-Hires (US and Canada Payroll Employees)

## Transaction Type – Add Employee Business Process (New Hires, Re-Hires)

### Comments/ Special Instructions

Data in this record type will be processed via the Hire an Employee Business Process. This includes hires and rehires within US and Canada companies but will not include Global company employees.

The company's country the employee is being hired into will be used to distinguish US employees from Canadian employees.

If there is no Supplemental data included, then the import will respect standard workflow configuration. If Supplemental data (other than PC fields) is included with the Hire, then the import will by-pass workflow approvals and process the entire set of data with no workflow approval.

**Note:** If a Rehire is sent in a file followed by a record for a supplemental data update for the same employee, the supplemental data will update regardless if the Rehire failed.

The UKG Pro Import Tool does not support importing resident local tax data, except for Local PSD. However, SmartTax can be leveraged within the integration to assist with Work-in and Resident Tax default values if the service is turned on and configured. The import will be able to utilize this service.

The Hire business process also includes [Direct Deposit](#), [UTM](#) and [PTO plans](#). See the separate sections for these fields. Direct Deposit and PTO Plans allow for multiples of each. UTM is only applicable to clients using Time Management.

The Hire business process does not include what is termed as “supplemental data”. However, this type of data can be included with a hire transaction and processed, or it can be sent as a standalone transaction. The Supplement Data includes:

• <a href="#">User Defined Fields</a>	• <a href="#">Emergency Contacts</a>
• <a href="#">Licenses &amp; Certifications</a>	• <a href="#">Skills</a>
• <a href="#">Previous Employment</a>	• <a href="#">Awards</a>
• <a href="#">Company Property</a>	• <a href="#">Alternate Phone</a>
• <a href="#">Additional Addresses</a>	• <a href="#">Secondary Jobs</a>
• <a href="#">Education</a>	

This also supports Multi-Company hires (employee is to be active in more than one company at a time). It allows for them to process as a rehire, without them being terminated in the other company. (You must send a multi-company hire indicator in the record. Refer to grid below.

Fields listed below as required in grid are for New Hire\*. If Rehiring, the only field required is:

- Date of Last Hire

\*using job code-based configuration, not position management, and not pay scales

If using a position-based configuration, notes are included below for fields applicable/required

- If position is sent it will pull the following fields for the position based on your position configuration and they are not required
  - OrgLv1-4
  - Job
  - Location

If using pay scales and the job is setup for pay scales, notes are included below for fields applicable/required

Header and Transaction Rules – New Hires and Re-Hires Records							
Field Label	Required	XPath	Import Requirements				
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	Identifies the type of transaction to process. Available field options are: <table border="1" data-bbox="829 1058 1606 1177"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>New Hires/Rehires</td> <td>HIRE</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	New Hires/Rehires	HIRE
Options	TRANSACTIONTYPE Value						
New Hires/Rehires	HIRE						
EmployeeKey	Y	/Transactions/Transaction/Header/IdentifierRule/	It will be used to identify the value to use to determine if the employee already has an existing record in UKG Pro and determine if the employee is a New Hire or a Rehire. Note: this field is only required if this is a rehire.  Available field options are outlined in the HR Interface for UKG Pro > Employee Key section.				

**Header and Transaction Rules – New Hires and Re-Hires Records**

Field Label	Required	XPath	Import Requirements		
Workflow Approvals	A	/Transactions/Transaction/Header/ApprovalRule/	<p>If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>		
Foreign Address Handling	A	/Transactions/Transaction/Header/ForeignAddressRule/	<p>For employees hired in the US, foreign addresses are not supported. Available field options are outlined in the HR Interface for UKG Pro &gt; Foreign Address Handling section</p> <p>After the address is changed to a foreign country, the resident state tax code will be switched from the one set based on the company address' state to Foreign National (FNSIT).</p>		
Delete All	A	/Transactions/Transaction/Header/DeleteAllRule/	<p>Applicable to Rehires only and certain supplemental pieces of data that are being sent with the Hire:</p> <ul style="list-style-type: none"> <li>• Licenses</li> <li>• Previous Employment</li> <li>• Company Property</li> <li>• Education</li> <li>• Other Addresses</li> <li>• Awards</li> </ul> <p>The rule applies to certain types of supplemental data being sent with the Hire so they will all be treated the same based on the rule. (Ex. Licenses and Company Property are being sent with the HIRE, data for those items will be deleted if rule is set to ON). If you don't want them to be treated the same, separate transactions can be sent for the supplemental data.</p> <p>Setting Name: DeleteAllRule</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 60%;"><b>Options</b></td> <td style="width: 40%;"><b>DeleteAllRule Value</b></td> </tr> </table>	<b>Options</b>	<b>DeleteAllRule Value</b>

## FEIN Transfers (aka Component Company Changes)

Transaction Type – FEIN Transfers (aka Component Company Changes)	
<b>Comments/Special Instructions</b>	<p>Data in this record type will be processed via the Transfer Employee Business Process. This includes US and Canada only. Global employee transfers are not supported.</p> <p>If for some reason a Transfer cannot be handled (transferring back into a company the employee has already been previously employed) will be treated as a termination from the leaving company and a rehire into the moving to company. Note that this is not a configuration setting.</p> <p>For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.</p> <p><b>Note:</b> For information on two other specific Transfer Related Configuration Settings (DirDepstoNewCompOnFailedTransfer and PTOTOnewCompOnFailedTransfer), refer to the <b>HR Interface for UKG Pro</b> section within this document. These are global settings. They cannot be set at the individual record level.</p>

Header and Transaction Rules – FEIN Transfers (aka Component Company Changes)							
Field Label	Required	XPath	Import Requirements				
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	<p>Identifies the type of transaction to process. Available field options are:</p> <table border="1" style="width: 100%;"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>Transfer Employee</td> <td>TRANSFER</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	Transfer Employee	TRANSFER
Options	TRANSACTIONTYPE Value						
Transfer Employee	TRANSFER						
EmployeeKey	Y	/Transactions/Transaction/Header/IdentifierRule/	<p>It will be used to identify the value to use to determine if the employee already has an existing record in UKG Pro and determine if the employee is a New Hire or a Rehire.</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>				

**Header and Transaction Rules – FEIN Transfers (aka Component Company Changes)**

Field Label	Required	XPath	Import Requirements						
Workflow Approvals	A	/Transactions/Transaction/Header/ApprovalRule/	<p>If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>						
Transfer PTO Rule	A	/Transactions/Transaction/Header/TransferPTORule/	<p>For Transfer, how to handle PTO plans (Transfer from Company A to Company B):</p> <table border="1"> <thead> <tr> <th>Options</th> <th>TRANSFERPTORULE Value</th> </tr> </thead> <tbody> <tr> <td>Option for transferring balances</td> <td>TRANSFERALL</td> </tr> <tr> <td>Remove all existing PTO Records before new PTO Codes are added</td> <td>n/a</td> </tr> </tbody> </table> <p>This will handle transferring a PTO Plan (accrual option) to the same PTO Plan (accrual option) in the new company. It will not handle if there are multiple plans of the same type (accrual code). It will not transfer from one plan to another plan of the same type. New plans can also be sent.</p> <p>If TRANSFERALL is not on, then just get the new ones sent setup.</p>	Options	TRANSFERPTORULE Value	Option for transferring balances	TRANSFERALL	Remove all existing PTO Records before new PTO Codes are added	n/a
Options	TRANSFERPTORULE Value								
Option for transferring balances	TRANSFERALL								
Remove all existing PTO Records before new PTO Codes are added	n/a								
Transfer Deduction Rule	A	/Transactions/Transaction/Header/TransferDeductionRule/	<p>For Transfer, how to handle Deduction/Benefit plan goals:</p> <table border="1"> <thead> <tr> <th>Options</th> <th>TRANSFERDEDUCTION_RULE Value</th> </tr> </thead> <tbody> <tr> <td>Option for transferring goal amount</td> <td>GOALAMOUNT</td> </tr> <tr> <td>Do not transfer the employee’s goal amounts</td> <td>n/a</td> </tr> </tbody> </table> <p>This will be applicable to all deduction/benefit plans that have been transferred.</p> <p>If GOALAMOUNT is not on, then no goal amounts are transferred with the deduction/benefit plan(s).</p>	Options	TRANSFERDEDUCTION_RULE Value	Option for transferring goal amount	GOALAMOUNT	Do not transfer the employee’s goal amounts	n/a
Options	TRANSFERDEDUCTION_RULE Value

## Workforce Management (WFM)

### Detail Record – Workforce Management

#### Comments/Special Instructions

The data processes via the Workforce Management business process and transaction type for this is WFM.

It is used for adding or updating the employee Workforce Management data. If the date is found in employee's existing template record, then the update transaction takes place. Otherwise, the record passed gets added in Workforce Management. Dates are not auto computed and are part of the import process and passed in Import file.

Import Workforce Management records only for employees that are marked IsPrimary as YES (when MultiCompany settings enabled) or IsPrimary= Any (Y/N) or null (when MultiCompany settings are not enabled).

### Header and Transaction Rules – Workforce Management (WFM)

Field Label	Required	XPath	Import Requirements				
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	<p>Identifies the type of transaction to process. Available field options are:</p> <table border="1"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>Workforce Management</td> <td>WFM</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	Workforce Management	WFM
Options	TRANSACTIONTYPE Value						
Workforce Management	WFM						
Identifier Rule	Y	/Transactions/Transaction/Header/IdentifierRule/	<p>It will be used to identify the value to use to determine what employee to update.</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>				
Approval Rule	N	/Transactions/Transaction/Header/ApprovalRule/	<p>If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>				

Field Requirements – Add/Change Workforce Management Records						
UKG Pro Field Label	Required	XPath	Field Type	Length	Code Table Validation	Import Requirements
						Include only fields that are part of the WFM transaction type.
Company Code	Y	/Transactions/Transaction/KeyFields/CompanyCode/	String	5		Requires a valid UKG Pro Company Code.  Codes are client configured. This field will be used with the Employee Key to know which job record to update.
Identifier	Y	/Transactions/Transaction/KeyFields/Identifier/	String	50		This field will be used with the Company code to know which record to update.
Effective Date	Y	/Transactions/Transaction/KeyFields/EffectiveDate/	String	10	N	It is the effective date of the transaction passed.  Format: mm/dd/yyyy
Enabled	Y	/Transactions/Transaction/WfmEmployeeInfo/IsWfmEmployeeEnabled/	String	1	N	It shows that WFM is enabled for that employee or not.
Is Primary	Y	/Transactions/Transaction/WfmEmployeeInfo/IsWfmPrimary/	String	1	N	It shows that the passed employee is Primary for that company or not.

Field Requirements – Add/Change Workforce Management Records						
Activities Profile Template	N	/Transactions/Transaction/WfmTimeInfo/WfmActivitiesProfileTemplateDesc/	String	300	N	This template is present under Activities on the WFM screen.
License Profile Template	Y	/Transactions/Transaction/WfmTimeInfo/WfmLicenseProfileTemplateDesc/	String	300	N	This template is present under Time Section on the WFM screen.
Employee Profile Template	N	/Transactions/Transaction/WfmTimeInfo/WfmEmployeeProfileTemplateDesc/	String	300	N	This template is present under Time Section on the WFM screen.
Employee Profile Template Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmEmployeeProfileTemplate_EffectiveDate/	String	10	N	This template is present under Time Section on the WFM screen. It contains the effective date for corresponding Employee Profile Template. The date format should be mm/dd/yyyy.
Timekeeping Profile Template	Y	/Transactions/Transaction/WfmTimeInfo/WfmTimekeepingProfileTemplateDesc/	String	300	N	This template is present under Time Section on the WFM screen.
Timekeeping Profile Template Effective Date	Y	/Transactions/Transaction/WfmTimeInfo/WfmTimekeepingProfileTemplate_EffectiveDate/	String	10	N	This template is present under Time Section on the WFM screen. It contains the effective date for corresponding Timekeeping Profile Template. The date format should be mm/dd/yyyy.

Field Requirements – Add/Change Workforce Management Records						
Schedule Profile Template	N	/Transactions/Transaction/WfmTimeInfo/WfmScheduleProfileTemplateDesc/	String	300	N	This template is present under Time Section on the WFM screen.
Schedule Profile Template Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmScheduleProfileTemplate_EffectiveDate/	String	10	N	This template is present under Time Section on the WFM screen. It contains the effective date for corresponding Schedule Profile Template.  The date format should be mm/dd/yyyy.
Accrual Profile Template	N	/Transactions/Transaction/WfmTimeInfo/WfmAccrualProfileTemplateDesc/	String	300	N	This template is present under Time Section on the WFM screen.
Accrual Profile Template Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmAccrualProfileTemplate_EffectiveDate/	String	10	N	This template is present under Time Section on the WFM screen. It contains the effective date for corresponding Accrual Profile Template.  The date format should be mm/dd/yyyy.
Accrual Profile	N	/Transactions/Transaction/WfmTimeInfo/WfmAccrualProfileDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.
Accrual Profile Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmAccrualProfile_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Accrual Profile Template.

Field Requirements – Add/Change Workforce Management Records						
						The date format should be mm/dd/yyyy.
Payrule	N	/Transactions/Transaction/ WfmTimeInfo/WfmPayruleDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.
Payrule Effective Date	N	/Transactions/Transaction/ WfmTimeInfo/WfmPayrule_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Payrule Template.  The date format should be mm/dd/yyyy.
Employment Terms	N	/Transactions/Transaction/ WfmTimeInfo/WfmEmploymentTermsDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.
Employment Terms Effective Date	N	/Transactions/Transaction/ WfmTimeInfo/WfmEmploymentTerms_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Employment Terms Template.  The date format should be mm/dd/yyyy.
Percentage Allocation Rule	N	/Transactions/Transaction/ WfmTimeInfo/WfmPercentageAllocationRuleDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.

Field Requirements – Add/Change Workforce Management Records						
Percentage Allocation Rule Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmPercentageAllocationRule_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Percentage Allocation Rule Template.  The date format should be mm/dd/yyyy.
Employee Job Transfer Set	N	/Transactions/Transaction/WfmTimeInfo/WfmEmployeeJobTransferSetDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.
Employee Job Transfer Set Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmEmployeeJobTransferSet_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Employee Job Transfer Set Template.  The date format should be mm/dd/yyyy.
Employee Job Transfer Set Manager Addition	N	/Transactions/Transaction/WfmTimeInfo/WfmEmployeeJobTransferSetManagerAdditionDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen. The effective date corresponding to this field will be same as the Employee Job transfer Set.
Manager Job Transfer Set	N	/Transactions/Transaction/WfmTimeInfo/WfmManagerJobTransferSetDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.

Field Requirements – Add/Change Workforce Management Records						
Manager Job Transfer Set Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmManagerJobTransferSet_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Manager Job Transfer Set Template.  The date format should be mm/dd/yyyy.
Schedule Group Assignment	N	/Transactions/Transaction/WfmTimeInfo/WfmScheduleGroupAssignmentDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.
Schedule Group Assignment Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmScheduleGroupAssignment_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Schedule Group Assignment Template.  The date format should be mm/dd/yyyy.
Employee Group	N	/Transactions/Transaction/WfmTimeInfo/WfmEmployeeGroupDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen.
Employee Group Effective Date	N	/Transactions/Transaction/WfmTimeInfo/WfmEmployeeGroup_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding Employee group Template.  The date format should be mm/dd/yyyy.

Field Requirements – Add/Change Workforce Management Records						
TimeZone	N	/Transactions/Transaction/ WfmTimeInfo/WfmTimezoneDesc/	String	300	N	This template is present under Time Section on the WFM screen.
Fte Percentage	N	/Transactions/Transaction/ WfmTimeInfo/WfmFTEPercentageDesc/	String	300	N	This template is present under Direct Assignments Section on the WFM screen. The value should be an integer value ranging from 1 to 100.
Fte Percentage Effective Date	N	/Transactions/Transaction/ WfmTimeInfo/WfmFTEPercentage_EffectiveDate/	String	10	N	This template is present under Direct Assignments Section on the WFM screen. It contains the effective date for corresponding FTE Percentage Template. The date format should be mm/dd/yyyy.
Attendance Profile Template	N	/Transactions/Transaction/ WfmLeaveAttendanceInfo/WfmAttendanceProfileTemplateDesc/	String	300	N	This template is present under Leave & Attendance Section on the WFM screen.
Attendance Profile Template Effective Date	N	/Transactions/Transaction/ WfmLeaveAttendanceInfo/WfmAttendanceProfileTemplate_EffectiveDate/	String	10	N	This template is present under Leave & Attendance Section on the WFM screen. It contains the effective date for corresponding Attendance Profile Template. The date format should be mm/dd/yyyy.
Leave Profile Template	N	/Transactions/Transaction/ WfmLeaveAttendanceInfo/WfmLeaveProfileTemplateDesc/	String	300	N	This template is present under Leave & Attendance Section on the WFM screen.

Field Requirements – Add/Change Workforce Management Records						
BadgeID	N	/Transactions/Transaction/WfmTeleStaffInfo/WfmBadgeID/	String	30	N	This template is present under TeleStaff Information on the WFM screen. It contains numbers and characters with no special characters other than a dot(.).
Seniority Number	N	/Transactions/Transaction/WfmTeleStaffInfo/WfmSeniorityNumber/	String	300	N	This template is present under TeleStaff Information on the WFM screen. It contains only numbers with length 12 (including decimal). 2 digits after decimal and 9 digits before decimal.

Detail Record – Job and Pay Rate Changes

## Job and Pay Rates Changes

### Detail Record – Job and Pay Rate Changes

#### Comments/Special Instructions

The data will process via the Change job, Salary and Review business process and part of the JOBSALARY transaction type for changes.

Although the Change Job, Salary and Review business process handles review data as well, for the import, it will be processed separately under a different transaction type.

For UKG Pro Payroll Only clients, UKG Pro is not the system of source and the Job History tables will not necessarily reflect the job history of the HR System. The goal of the integration is to only maintain the information that is necessary for processing payroll, it will not maintain the Job History.

\*using job code-based configuration, not position management and not pay scales

If using a position-based configuration, notes are included below for fields applicable/required

- If position is sent it will pull the configured following fields for the position based on your position configuration and they are not required
  - OrgLv1-4
  - job
  - location

If position is sent it will pull the following fields for the position and they are not required.

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

If a record is processed which resulted in no changes to the employee's record, the record's status on the Results page will display as 'Unchanged' and no workflow will be initiated.

Header and Transaction Rules – Job and Pay Rate Changes							
Field Label	Required	XPath	Import Requirements				
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	<p>Identifies the type of transaction to process. Available field options are:</p> <table border="1"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>Job and Salary changes</td> <td>JOBSALARY</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	Job and Salary changes	JOBSALARY
Options	TRANSACTIONTYPE Value						
Job and Salary changes	JOBSALARY						
EmployeeKey	Y	/Transactions/Transaction/Header/IdentifierRule/	<p>It will be used to identify the value to use to determine what employee to update.</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>				
Workflow Approvals	A	/Transactions/Transaction/Header/ApprovalRule/	<p>If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>				
Job Effective Rule	A	/Transactions/Transaction/Header/JobEffectiveRule/	<p>This rule will define how to handle a Job/Pay change if it is retroactive (prior to the effective date of an already existing Job History record).</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Effective Dating section.</p>				
Additional Data	A		Supported				
Platform Configuration Data	A		Currently supported on Change Job page				

Field Requirements – Job and Pay Rate Change Records						
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
						<b>Include only fields that are part of the Job and Pay Rate Change transaction type.</b>
Company	/Transactions/Transaction/KeyFields/CompanyCode/	char	1	Y	Y	
Employee Key	/Transactions/Transaction/KeyFields/Identifier/	varchar	50	N	Y	This field will be used with the Company code to know which record to update. One of the 4 options available as outlined in the Employee Key section above should be sent.
Effective Date	/Transactions/Transaction/KeyFields/EffectiveDate/	datetime	10	N	Y	Format: mm/dd/yyyy
Job Change Reason	/Transactions/Transaction/JobInformation/JobChangeReason/	char	6	Y	Y	Requires a valid UKG Pro Job Change Reason Code. Codes are client configured.  Codes are setup in the System Configuration > Business Rules > Job Change Reasons page. You will need to provide valid values to Vendor.
Supervisor	/Transactions/Transaction/JobInformation/SupervisorId/	char	9	N	A	The EmpNo should be sent and a lookup can be done to the SupervisorID (EEID)
Supervisor's Company Code	/Transactions/Transaction/JobInformation/SupervisorCompanyCode/	char	5	N	A	The Supervisor's Company Code should be sent to help identify the correct EmpNo of the employee's supervisor.
Job group	/Transactions/Transaction/JobInfor	char	5	Y	A	Available when client has configured using Job Groups.

Field Requirements – Job and Pay Rate Change Records						
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
	mation/JobGrpCode/					<p>Requires a valid UKG Pro Job Group Code. Codes are client configured.</p> <p>If the employee’s new job belongs to a job group, then the Import Tool will auto assign the job group. If the job is included in several job groups, the first job group found will be assigned. If you do not wish a job group to be assigned to the employee, then an empty tag/element must be sent in the file.</p> <p>Codes are setup in the Menu &gt; System Configuration &gt; Business Rules &gt; Job Groups page. You will need to provide valid values to Vendor.</p>
Job	/Transactions/Transaction/JobInformation/JobCode/	char	8	Y	Y	<p>Not required if using Position Management</p> <p>Required if a job change occurs that includes a Job Group change where the Job Code is not in that new Job Group.</p> <p>Requires a valid UKG Pro Job Code. Codes are client configured.</p> <p>Codes are setup in the Menu &gt; System Configuration &gt; Business Rules &gt; Jobs page. You will need to provide valid values to Vendor.</p>
Pay Scale	/Transactions/Transaction/JobInfor	char	6	Y	A	<p>Only applicable when client has configured using Pay Scales and the job code is setup using Pay Scales</p>

## Status and Key Date Changes

### Detail Record – Status and Key Dates Records

#### Comments/Special Instructions

The data will process via the Change Status and Key Dates business process and part of the STATUS transaction type for changes.

This is not used to terminate an employee; terminations are handled via the Terminate Employee transaction.

This is not used to rehire a US/CAN employee; rehires are handled via the Hire transaction.

This is not used to reactivate a Global employee; reactivations are handled via the Global Status Change transaction.

Used primarily for changing an employee from Active to LOA or LOA back to Active (not Terminations). Also used for processing updates to Employment dates, Payroll Status Dates and Benefit Seniority.

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

If a record is processed which resulted in no changes to the employee's record, the record's status on the Results page will display as 'Unchanged' and no workflow will be initiated.

## Status History Changes

### Detail Record – Add/Update/Delete Status History

#### Comments/Special Instructions

The data processes via the Add/Change Status History business process and transaction type for this is Status History.

It is used to add, update or delete the employee status history based on a date. If the date is found in employee's history record, then the update transaction takes place. Otherwise, the record passed gets added in history. Dates are automatically computed and are not a part import process.

For delete, the transaction flag **must** be D. Records are deleted based on effective date, as configured.

Records that cannot be edited are when:

- 1) Original status history record (EshEditFlag = O or 0) cannot be updated
- 2) The top of stack record. For example, the record with the highest Status Start Date and if there are duplicates, then the record <<Top of Stack: Top EshSystemID>>

Header and Transaction Rules – Add/Change Status History

## Job History Changes

### Detail Record – Add/Update/Delete Job History

#### Comments/Special Instructions

The data processes via the Add/Change Job History business process and transaction type for this is Job History.

It is used to add, update or delete the employee job history based on a date and passed transaction flag.

When the Delete tag is enabled:

- 1) Record on the top of the stack for an employee cannot be deleted.
- 2) Record on the bottom of the stack for an employee cannot be deleted.
- 3) If a record is not found then, the delete record won't be processed for that employee.
- 4) If there are multiple records found to date for an employee, then delete the one as per the latest audit key.
- 5) If DeleteAll=ON and flag is D, then deletion will remove all records matching the effective date passed for an employee.

**Note:** When the UTA product key is enabled, the Job History Import is disabled to avoid changes when retro pay is on.

### Header and Transaction Rules – Add/Change Job History

Field Label	Required	XPath	Import Requirements				
Transaction Type	Y	/Transactions/Transaction/Header/TransactionType/	Identifies the type of transaction to process. Available field options are: <table border="1" data-bbox="955 1031 1764 1112"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>Add/Change Job History</td> <td>JOB HISTORY</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	Add/Change Job History	JOB HISTORY
Options	TRANSACTIONTYPE Value						
Add/Change Job History	JOB HISTORY						
Identifier Rule	Y	/Transactions/Transaction/Header/IdentifierRule/	It will be used to identify the value to use to determine what employee to update.  Available field options are outlined in the HR Interface for UKG Pro > Employee Key section.				

Header and Transaction Rules – Add/Change Job History			
Approval Rule	Y	/Transactions/Transaction/ Header/ApprovalRule/	<p>If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>
DeleteAllRule	N	/Transactions/Transaction /Header/ DeleteAllRule/	<p>If in the Business Process it enabled (DeleteAll Tag 'ON') and the transaction flag is D, this will allow deleting all records matching an effective date for an employee.</p> <p>When the DeleteAll Tag is 'OFF' and Transaction flag is 'D' then the top most record (or record with highest Audit Key) matching Effective Date is deleted.</p> <p>This functionality is only applicable to use with XML and is not supported in CSV based import.</p>

Field Requirements – Add/Change Job History Records						
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
						<b>Include only fields that are part of the Add/Change Job History transaction type.</b>
Company Code	/Transactions/Transaction/KeyFields/ CompanyCode/	string	5		Y	Requires a valid UKG Pro Company Code. Codes are client configured.  This field will be used with the Employee Key to know which job record to update.
Identifier	/Transactions/Transaction/KeyFields/ Identifier/	string	50		Y	This field will be used with the Company code to know which record to update.

Field Requirements – Add/Change Job History Records						
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
						One of the 4 options available as outlined in the Employee Key section above should be sent.
Effective Date	/Transactions/Transaction/KeyFields/EffectiveDate/	String	10		Y	Defines the start date of the job in historical records.  It is used to identify employee historical record for update/delete. If no matching effective date is found when updating, it simply adds a record.
JHTransactionFlag	/Transactions/Transaction/JobHistory/JHTransactionFlag	string	1		A	Transaction flag is to define the action to be performed by the transaction.  To <b>add/update</b> a record, do not pass any value or pass: <JHTransactionFlag>A</JHTransactionFlag>  To <b>delete</b> a record, then pass D: <JHTransactionFlag>D</JHTransactionFlag>  If DeleteAllRule=ON but the transaction flag is blank, then record will get added.  To <b>update</b> a record, then pass U: <JHTransactionFlag>U</JHTransactionFlag>  If the record passed is for update, but the effective date does not exist, then record will be added.
Job Change Reason	/Transactions/Transaction/JobHistory/JHReason	string	6		A	Requires a valid UKG Pro Job Change Reason Code.  Codes are client configured. Codes are setup in the Job Change Reasons page (Menu > System Configuration >

Field Requirements – Add/Change Job History Records						
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
						Business Rules > Job Change Reasons). You will need to provide valid values to Vendor. If the reason codes are 100, 101, TRI, or TRO, then restrict delete based on icvConfigSettingValue in table ImportTool_ConfigSettings.
Job Group	/Transactions/Transaction/JobHistory/JHJobGroupCode	string	5			Available when you have configured Job Groups.  Requires a valid UKG Pro Job Group Code. Codes are client configured.  If the employee's new job belongs to a job group, then the Import Tool will auto assign the job group. If the job is included in several job groups, the first job group found will be assigned. If you do not want to assign a job group to the employee, then an empty tag/element must be sent in the file.  Codes are setup in the Menu > System Configuration > Business Rules > Job Groups page.  You will need to provide valid values to Vendor.
Job	/Transactions/Transaction/JobHistory/JHJobCode	String	8			Not required if using Position Management.  Required if a job change occurs that includes a Job Group change where the Job Code is not in that new Job Group.

Field Requirements – Add/Change Job History Records						
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
						Requires a valid UKG Pro Job Code. Codes are client configured. Codes are setup in the Menu > System Configuration > Business Rules > Jobs page.  You will need to provide valid values to Vendor.
Alternate title	/Transactions/Transaction/JobHistory/JHAlternateJobTitle	String	150			
Salary Grade	/Transactions/Transaction/JobHistory/JHSalaryGrade	String	6			
FLSA	/Transactions/Transaction/JobHistory/JHFLSACategory	String	1			
Pay Group	/Transactions/Transaction/JobHistory/JHPayGroup	String	6			Requires a valid UKG Pro Pay Group Code. Codes are client configured. Codes are setup in the System Configuration > Business Rules > Pay Groups page.  You will need to provide valid values to Vendor.
Pay Frequency	/Transactions/Transaction/JobHistory/JHPayFrequency	String	1			
Scheduled Hours	/Transactions/Transaction/JobHistory/JHScheduledWorkHours	Decimal	16			The hours scheduled for the employee's pay period/frequency. <ul style="list-style-type: none"> <li>If an employee is biweekly, the hours sent should correspond to a biweekly frequency (for example, 80).</li> </ul>

Field Requirements – Add/Change Job History Records												
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements						
						<ul style="list-style-type: none"> <li>If an employee is weekly, then the hours sent should correspond to a weekly frequency (for example, 40).</li> </ul> Format nnnn.nnnn						
Status	/Transactions/Transaction/JobHistory/JHEmplStatus	String	1									
Employee Type	/Transactions/Transaction/JobHistory/JHEmployeeTypeCode	String	3			Requires a valid UKG Pro Employee Type Code. Codes are client configured.  Codes are setup in the System Configuration > Business Rules > Employee Types page.  You will need to provide valid values to Vendor.						
Salary/Hourly	/Transactions/Transaction/JobHistory/JHSalaryOrHourly	String	1			Requires a valid UKG Pro Hourly/Salary Code. ## Terminations

### Detail Record – Terminate Employee

#### Comments/Special Instructions

The data will process via the Terminate Employee business process and part of the TERMINATION transaction type for changes.

When terminations are processed, stop dates in UKG Pro for Benefits/Deductions will be populated, based on the Deduction/Benefit rules that have been set up in the UKG Pro system.

Fields listed below as required are for Terminating an employee. If you are modifying a termination record, in addition to the EE/Company identifier fields, the only fields required are:

- Termination Date (DateOfTermination)
- Paid Thru (DatePaidThru)
- Termination Reason (TermReasonCode)

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

### Header and Transaction Rules – Terminate Employee Records

Field Label	Required	XPath	Import Requirements				
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	Identifies the type of transaction to process. Available field options are: <table border="1" data-bbox="978 1036 1789 1117"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>Terminate Employee</td> <td>TERMINATION</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	Terminate Employee	TERMINATION
Options	TRANSACTIONTYPE Value						
Terminate Employee	TERMINATION						
EmployeeKey	Y	/Transactions/Transaction/Header/IdentifierRule/	It will be used to identify the value to use to determine what employee to update.  Available field options are outlined in the HR Interface for UKG Pro > Employee Key section.				

Header and Transaction Rules – Terminate Employee Records			
Field Label	Required	XPath	Import Requirements
Workflow Approvals	A	/Transactions/Transaction/ Header/ApprovalRule/	If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).  Available field options are outlined in the HR Interface for UKG Pro > Employee Key section.
Additional Data	A		Supported

## Work Location and Work-in State Tax Changes

### Detail Record – Work Location and Work-in State Tax Changes (USA)

#### Comments/Special Instructions

The data will process via the Add Work Location (USA) business process and part of the WORKLOCATION transaction type for changes.

This business process is used to update Location and/or State work-in taxes for US employees only. This will handle changes to the current location as well as adding locations if the employee is to be taxed in multiple locations. A separate transaction type, TAXLOCATIONSETTING, will be used to pass data that will indicate an employee is to be taxed in multiple locations.

A separate process will handle location changes for Canada.

Global location changes are not currently supported.

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

## Work Location Settings Changes

### Detail Record – Work Location Settings Changes (USA)

#### Comments/Special Instructions

The data will process via the Change Location Settings (USA) business process and part of the TAXLOCATIONSETTINGS transaction type for changes.

This business process is used to indicate an employee is to be taxed in multiple locations or not (USA).

This is not applicable to Canada.

Global location setting changes are not currently supported.

### Header and Transaction Rules – Work Location Settings Changes (USA)

Field Label	Required	XPath	Import Requirements				
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	Identifies the type of transaction to process. Available field options are: <table border="1" data-bbox="884 797 1766 878"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>Change Location Settings</td> <td>TAXLOCATIONSETTINGS</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	Change Location Settings	TAXLOCATIONSETTINGS
Options	TRANSACTIONTYPE Value						
Change Location Settings	TAXLOCATIONSETTINGS						
EmployeeKey	Y	/Transactions/Transaction/Header/IdentifierRule/	It will be used to identify the value to use to determine what employee to update.  Available field options are outlined in the HR Interface for UKG Pro > Employee Key section.				
Workflow Approvals	A	/Transactions/Transaction/Header/ApprovalRule/	If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).  Available field options are outlined in the HR Interface for UKG Pro > Employee Key section.				
Additional Data	A		Supported

## Work Location and Work-in Provincial Tax Changes

### Detail Record – Work Location and Work-in Provincial Tax Changes (CAN)

#### Comments/Special Instructions

The data will process via the Add Work Location (CAN) business process and part of the CAWORKLOCATION transaction type for changes.

This business process is used to update Location and/or Provincial taxes for Canadian employees only. This will handle adding locations if the employee is to be taxed in multiple locations.

A separate process will handle location changes for US.

Global location changes are not currently supported.

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

### Header and Transaction Rules – Work Location and Work-in Provincial Tax Changes (CAN)

Field Label	Required	XPath	Import Requirements				
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	Identifies the type of transaction to process. Available field options are: <table border="1" data-bbox="955 950 1801 1031"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>Add Work Location</td> <td>CAWORKLOCATION</td> </tr> </tbody> </table>	Options	TRANSACTIONTYPE Value	Add Work Location	CAWORKLOCATION
Options	TRANSACTIONTYPE Value						
Add Work Location	CAWORKLOCATION						
EmployeeKey	Y	/Transactions/Transaction/Header/IdentifierRule/	It will be used to identify the value to use to determine what employee to update.  Available field options are outlined in the HR Interface for UKG Pro > Employee Key section.				
Workflow Approvals	A	/Transactions/Transaction/Header/ApprovalRule/	If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).				

Header and Transaction Rules – Work Location and Work-in Provincial Tax Changes (CAN)			
Field Label	Required	XPath	Import Requirements

# Direct Deposit

Detail Record – Direct Deposit Changes	
<b>Comments/Special Instructions</b>	<p>This will be processed with Hire as well as for changes. The data will process via the Add Employee business process and part of the HIRE transaction type for hires and via the Direct Deposit Detail business process and part of the DIRECTDEPOSIT transaction type for changes.</p> <p>Multiple direct deposit accounts can be established. The data provided will be iterative for the number of accounts to be setup (i.e. the full set of fields will be sent 3 times if there are 3 accounts to be setup). Up to 8 accounts can be setup.</p> <p>If the direct deposit rule 'DeleteAllRule' is not setup and no new accounts are sent for a NEWHIRE/REHIRE transaction type, UKG Pro Core will inactivate all existing direct deposit accounts. If new accounts are sent, all existing accounts will be dropped (deleted) and the ones included in the file will be added. Refer to the Direct Deposit Rule below for additional information on Rehires.</p> <p>ONLY REQUIRED IF UKG Pro Web Portal will not be used for Employees to process Direct Deposit Changes. Most UKG Pro Payroll Only customers will use the UKG Pro Web Portal Self-Service functionality to have their employees process Direct Deposit changes. If the 3<sup>rd</sup> Party HR System will be used for employee Direct Deposit Changes, then the Direct Deposit Change records can be included in the HR Import.</p> <p>Fields listed below as required are for adding a new Direct Deposit Account. If you are modifying a current direct deposit account, in addition to the EE/Company identifier fields, the only other fields required are:</p> <ul style="list-style-type: none"><li>• Account Number (DDAccountNumber)</li><li>• Routing Number (DDRoutingNumber)</li></ul> <p>For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.</p> <p><b>Important Note:</b> To delete a direct deposit account, you must use the DeleteAllRule and then import the correct deposit accounts. You cannot delete a single account.</p>

## PTO Plans

Detail Record – PTO Plans	
<b>Comments/Special Instructions</b>	<p>This will be processed with Hire and Transfers only. The data will process via the Add an Employee business process and part of the HIRE transaction type for hires and via the Transfer Employee business process and part of the TRANSFER transaction type for transfers.</p> <p>For rehires, if into same company all existing PTO plans will be dropped and re-added based upon plans sent on file. If rehired into a new company, it will add any new ones from the file. If into a new company, they are added based on plans sent on the file.</p> <p>For transfers, you can transfer all plans (one-one) as is and add any new ones from the file or all existing PTO plans will be dropped and re-added based plans sent on file.</p> <p>PTO Plan changes are supported. The data will process via the Add/Change PTO Benefit Plan business process and Or Delete PTO Benefit Plan business process and part of the ACCRUAL transaction type. The PTO plan, balance, accrued thru date and rollover (reset) data can be changed. If changing an existing PTO plan note that the existing PTO balances will be overwritten. Plans can be deleted with this process as well.</p> <ul style="list-style-type: none"><li>• Note: If you need to change the current option (Description – Accrual Option Code) for an existing PTO Plan, then you will first need to delete the plan and then add it</li></ul> <p>Multiple PTO Plans can be established. The data provided will be iterative for the number of plans to be setup (i.e. the full set of fields will be sent 3 times if there are 3 PTO plans to be setup). Up to 10 plans can be setup.</p> <p>Fields listed below as required are for adding a new PTO plan. If you are modifying a current plan, in addition to the EE/Company identifier fields, the only field required is:</p> <ul style="list-style-type: none"><li>• Description (AccrualOptionCode)</li></ul> <p>For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.</p>

## Deduction Changes

### Detail Record – Deduction Changes (Available with XML only)

#### Comments/Special Instructions

The data will process via the Add/Change Deduction business process and part of the DEDUCTIONS transaction type for changes.

This business process is used to add/update an employee's deductions.

**For XML files**, all calc rules are supported by this business process as long as a benefit amount is NOT associated with the deduction code.

**For CSV File Mappings**, Deferred Compensation and Loan/Miscellaneous deductions (using flat amounts) are supported when one of the following calculation rules are used:

Def comp incl \$ - sec125 * percent (USA only)	Def comp incl \$ * percent - (USA only)
Gross - sec125 * percent	Gross * percent
Gross - taxes * percent	Def comp incl \$ - sec125 - Dep sect125 * pct - (USA only)
(Def comp incl \$ - Non-Qual Plan \$) * pct - (USA only)	Flat amount
Special earnings1 * percent	Special earnings2 * percent
Special earnings3 * percent	Special earnings4 * percent
Special earnings5 * percent	Special earnings6 * percent
RRSP Incl. \$ * percent – (CAN only)	RPP Incl. \$ * percent – (CAN only)
Union Dues Incl. \$ * percent – (CAN only)	Union Dues Incl. Hrs * Rate – (CAN only)
RST * Percent – (CAN	None

Note: For both XML and CSV File Mapping

- Expressions for calc rules (EE, ER, Benefit) and any customs calcs need to be evaluated to ensure they will work with the import
- Deductions/Benefits which are setup to 'Use Rule at Employee Level' are now supported.

Multiple Deductions can be established per record. The Tool allows for a maximum of 10 for CSV, 100 for XML.

Fields listed below as required are for adding a new Deduction. If you are modifying a current Deduction, in addition to the EE/Company identifier fields, the only fields required are:

- History Record Effective Date
- Change Reason
- Deduction/Plan (DedCode)

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

Additional Notes:

- For information on the two specific Deduction Import Configuration Settings (UseEffectiveDating\_Deductions and Deductions\_UseDedSetupDates), refer to the 'UKG Pro Import Tool' Section within this document. These are global settings. They cannot be set at the individual record level.

Header and Transaction Rules – Deduction Changes							
Field Label	Required	XPath	Import Requirements

## Time Management (UTM)

### Detail Record – Time Management (UTM) Changes

#### Comments/Special Instructions

This will be processed with Hire as well as for changes. The data will process via the Add Employee business process and part of the HIRE transaction type for hires and via the Time Management business process and part of the UTM transaction type for changes.

IF client is using Time Management and you want to handle via the import for Hire or change transaction, all applicable, configured fields will need to be sent.

If not using Time Management or do not want to handle via import, these fields are not required.

### Header and Transaction Rules – Time Management (UTM) Changes

## Supplemental Data – Employee Contacts

### Detail Record – Supplemental Data

#### Comments/Special Instructions

This will be processed with Hires as well as for changes. The data will process via the Add Employee business process and part of the HIRE transaction type for hires and via Add/Change Contact business process and part of the CONTACTS transaction type for changes.

Multiple Contacts can be established. The data provided will be iterative for the number of Contacts to be setup (i.e. the full set of fields will be sent 3 times if there are 3 Contacts to be setup). Up to 10 Contacts can be setup.

For updates, the name and relationship will be used to determine which contact to update. However, depending on the data, it is possible that the same contact could be setup multiples times.

If Dependents and/or Beneficiaries are sent, adding them as a contact is handled with the import. However, whichever plan(s) they are to be linked to, will have to be handled manually by the client.

Fields listed below as required are for adding a new Contact. If you are modifying a current Contact, in addition to the EE/Company identifier fields, the only fields required are:

- First (ConNameFirst)
- Last (ConNameLast)
- Relationship (ConRelationshipCode)

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

Please review **Workflow Approvals** for more information on how approvals will be processed for Supplemental Data.

Header and Transaction Rules – Supplemental Data – Employee Contacts									
Field Label	Required	XPath	Import Requirements						
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	<p>Identifies the type of transaction to process. Available field options are:</p> <table border="1"> <thead> <tr> <th>Options</th> <th>TRANSACTIONTYPE Value</th> </tr> </thead> <tbody> <tr> <td>New Hires/Rehires</td> <td>HIRE</td> </tr> <tr> <td>Add/Change Contact</td> <td>CONTACTS</td> </tr> </tbody> </table> <p>The header is only needed when it is not part of the HIRE as the HIRE transaction has its own header.</p>	Options	TRANSACTIONTYPE Value	New Hires/Rehires	HIRE	Add/Change Contact	CONTACTS
Options	TRANSACTIONTYPE Value								
New Hires/Rehires	HIRE								
Add/Change Contact	CONTACTS								
EmployeeKey	Y	/Transactions/Transaction/Header/IdentifierRule/	<p>Identifies what field will be used to identify which Employee to update.</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>						
Workflow Approvals	A	/Transactions/Transaction/Header/ApprovalRule/	<p>If the Business Process has workflow approvals enabled, this will indicate whether to follow the configured (standard) workflow or to force auto-approval and not route it for approval(s).</p> <p>Available field options are outlined in the HR Interface for UKG Pro &gt; Employee Key section.</p>						
Additional Data	A		Supported						
Platform Configuration Data	A		<p>Currently supported</p> <p>If Platform Configuration fields are being used with this transaction which could have multiple Contacts, multiple instances (i.e. contacts) cannot be sent in the same transaction. Each contact would need to be sent in a separate transaction.</p>

## Supplemental Data– Licenses & Certifications

### Detail Record – Supplemental Data

#### Comments/Special Instructions

This will be processed with Hires as well as for changes. The data will process via the Add Employee business process and part of the HIRE transaction type for hires and via Add/Change Licenses and Certifications business process and part of the LICENSE transaction type for changes.

A change would be considered an add or delete all & add; not a modification to an existing one

Multiple License/Certifications can be established. The data provided will be iterative for the number of Licenses or Certifications to be setup (i.e. the full set of fields will be sent 3 times if there are 3 to be setup). Up to 10 Licenses/Certifications can be setup.

Fields listed below as required are for adding a new License record. A modification to an existing License record is not supported because there is not a field to uniquely identify which record to update.

Please review **Workflow Approvals** for more information on how approvals will be processed for Supplemental Data.

## Supplemental Data– Skills

### Detail Record – Supplemental Data

#### Comments/Special Instructions

This will be processed with Hires as well as for changes. The data will process via the Add Employee business process and part of the HIRE transaction type for hires and via Add/Change Skills business process and part of the SKILL transaction type for changes.

For a change, update will be done based on Skill code sent. Record sent will be used to add if the Skill code does not exist and edit an existing one if the Skill code does exist. This assumes multiple Skill codes of the same type do not exist for the employee. A modification to an existing Skill record if there are multiple Skill codes of the same type may not be handled correctly because there is not a field to uniquely identify which record to update.

Multiple Skills can be established. The data provided will be iterative for the number of Skills to be setup (i.e. the full set of fields will be sent 3 times if there are 3 to be setup). Up to 10 Skills can be setup.

Fields listed below as required are for adding a new Skill record. If you are modifying a current Skill, in addition to the EE/Company identifier fields, the only field required is:

- Skill (SkillID)

Please review **Workflow Approvals** for more information on how approvals will be processed for Supplemental Data.

Notes	/Transactions/Transaction/Awards/AwardNotes/	varchar	4000	N	A	

## Supplemental Data– Company Property

### Detail Record – Supplemental Data

#### Comments/Special Instructions

This will be processed with Hires as well as for changes. The data will process via the Add Employee business process and part of the HIRE transaction type for hires and via Add/Change Company Property business process and part of the COMPANYPROPERTY transaction type for changes.

A change would be considered an add or delete all & add; not a modification to an existing one

Multiple Company Property records can be established. The data provided will be iterative for the number of Property to be setup (i.e. the full set of fields will be sent 3 times if there are 3 to be setup). Up to 10 Company Property records can be setup.

Fields listed below as required are for adding a new Company Property record. A modification to an existing Company Property record is not supported because there is not a field to uniquely identify which record to update.

Please review **Workflow Approvals** for more information on how approvals will be processed for Supplemental Data.

### Header and Transaction Rules – Supplemental Data – Company Property

Field Label	Required	XPath	Import Requirements						
TransactionType	Y	/Transactions/Transaction/Header/TransactionType/	<p>Identifies the type of transaction to process. ## Supplemental Data– Alternate Phone Changes

### Detail Record – Supplemental Data

#### Comments/Special Instructions

This will be processed with Hires as well as for changes. The data will process via the Add Employee business process and part of the HIRE transaction type for hires and via Add/Change Alternate Phone business process and part of the ALTERNATEPHONE transaction type for changes.

For a change, update will be done based on phone number and type sent. Record sent will be used to add if the number and type does not exist and edit an existing one if the number and type does exist.

Multiple Alternate Phone records can be established. The data provided will be iterative for the number of Alternate Phones to be setup (i.e. the full set of fields will be sent 3 times if there are 3 to be setup). Up to 10 Alternate Phones can be setup.

Fields listed below as required are for adding a new Alternate Phone. If you are modifying a current alternate phone, in addition to the EE/Company identifier fields, the only fields required are:

- Type (AltPhoneTypeCode)
- Number (AltPhoneNumber)
- Country (AltCountryCode)

For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.

Please review **Workflow Approvals** for more information on how approvals will be processed for Supplemental Data.

## Supplemental Data – Other Addresses

Detail Record – Supplemental Data	
<b>Comments/Special Instructions</b>	<p>This will be processed with Hires as well as for changes. The data will process as a SQL update since the Other Addresses functionality is only available in the Backoffice. Include with the Add Employee business process and part of the HIRE transaction type for hires and part of the MULTIPLEADDRESS transaction type for changes.</p> <p>Multiple Address records can be established. The data provided will be iterative for the number of Addresses to be setup (i.e. the full set of fields will be sent 3 times if there are 3 to be setup). Up to 10 Address records can be setup.</p> <p>For a change, update will be done based on Address Type code sent. Record sent will be used to add if the Address Type code does not exist and edit an existing one if the Address Type code does exist. This assumes multiple Address Type codes of the same type do not exist for the employee. A modification to an existing Other Address record if there are multiple Address Type codes of the same type may not be handled correctly because there is not a field to uniquely identify which record to update.</p> <p>Fields listed below as required are for adding a new Other Address. If you are modifying a current Other Address, in addition to the EE/Company identifier fields, the only field required is:</p> <ul style="list-style-type: none"> <li>• Address Type (AddlAddressType)</li> </ul> <p>For a change transaction, unless otherwise noted, if a field is not provided, existing data is maintained. Only fields that are sent will be updated.</p> <p>Please review <b>Workflow Approvals</b> for more information on how approvals will be processed for Supplemental Data.</p>

## Additional Data

### Detail Record – Additional Data

#### Comments/Special Instructions

The data will process with other business processes and part of each of the supported transaction types. The XSD of the transaction will include an Additional Data node if it is supported with that transaction type.

If there is additional data that needs to be sent that is not defined above (custom field, core field not supported in above business processes) can be sent with another type of transaction that is being sent and will be processed as an ad hoc after process. It will not be processed through an established business process.

If Additional Data fields are being used with any transactions that could have multiple occurrences (for example, Contacts), the AddNameField will need to be used in a way to identify which occurrence of the data the additional data relates to.

### Header and Transaction Rules – Supplemental Data – Additional Data

Field Label	Required	XPath	Import Requirements
TransactionType			Included with other supported transactions types.

### Supplemental Field Requirements – Additional Data

UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements
						<b>Includes fields that are not covered by any of the other transaction types.</b>
Additional Data Field	/Transactions/Transaction/AdditionalData/AddDataName/	char	255		Y	
Additional Data Field Value	/Transactions/Transaction/AdditionalData/AddDataValue/	char	255		Y	

## Platform Configuration Fields

## Detail Record – Platform Configuration Fields

### Comments/Special Instructions

The data will process with other business processes and part of each of the supported transaction types. The XSD (XML schema) of the transaction will include a Platform Configuration node if it is supported with that transaction type.

**Note:** the following transaction types support Platform Configuration: New Hire/Re-Hire; Global New Hire; Termination; Change Name, Address, or Telephone; Change Job; Contacts; Company Property; Status and Key Dates.

If there is platform configuration data that needs to be sent that is not defined above (custom field, core field not supported in above business processes) can be sent with another type of transaction that is being sent and will be processed as an ad hoc after process. It will not be processed through an established business process.

If Platform Configuration fields are being used with any transactions that could have multiple occurrences (ex. Contacts), multiple instances (i.e. contacts) cannot be sent in the same transaction. Each occurrence would need to be sent in a separate transaction.

/Transactions/Transaction/PlatformConfiguration/PCToken  
/Transactions/Transaction/PlatformConfiguration/PCValue  
/Transactions/Transaction/PlatformConfiguration/PCViewPath

PCValue is the value you want to set. **Note:** that if data is to be imported into a Boolean Platform Configuration field, you must use the values of 'TRUE' or 'FALSE'. **The PC Fields link on the Configuration Settings page can be used to obtain these values as described in the Configuration Setting section.**

The other way to obtain the other two values is to go to the web page where the field is defined, and view the source (may differ based on browser), then you will see something like:

```
▼ <div class="controls">
  ▼ <div class="6a60b4b5-0120-4651-b710-5867b8646b11" data-bind="template: { name:
    'TextboxControl', data: { field:
    root._RISEmployeeEmployment._RISInternationalEmployeeEmployee._BImportTest,
    controlEnabled: true } }, css: { required:
    root._RISEmployeeEmployment._RISInternationalEmployeeEmployee._BImportTest.shouldR
    educeToRequired() } />
```

In the above example

- "PCToken" is "\_BImportTest"

	<ul style="list-style-type: none"> <li>“PCViewPath” is : “root._R1SEmployeeEmployment._R1SInternationalEmployeeEmployee”. You should use a browser like Chrome, then right click on the PC Field on the web page that it displays on and select ‘Inspect Element’. This will show you the information below (which will differ based on the PC Field).</li> </ul>

Supplemental Field Requirements – Platform Configuration Fields						
UKG Pro Field Label	XPath	Field Type	Length	Code Table Validation	Required	Import Requirements

**Note:** If data is to be imported into a Boolean Platform Configuration field, you must use the values of 'TRUE' or 'FALSE'.

## Assumptions

1. The source files will follow the standard naming convention.
2. The source new hire file will be accessible to UKG's Import Tool.
3. The archiving locations (archive and errors) need to be accessible to UKG's Import Tool.
4. All required fields are included on source file.
5. For any required fields included on source new hire file, the correct UKG Pro code values need to be sent or the file will fail.
6. Transferring global employees between component companies is not supported.
7. The import supports standard workflow configuration. It does not support conditional workflow. However, if it is needed, we can offer custom options to help address this. If conditional workflow is activated or previously configured conditional workflow is changed in any way, it may cause issues with the import. The Customs Application Development Team is not responsible for ensuring correct conditional workflow setups or support.
8. If Smart tax will be utilized, there are some instances where the query produces more than one result. In these cases, the top value will be selected, and client will be responsible for reviewing and updating it to the correct value as needed.
9. The Customer is responsible to ensure that the employee data and employee setups are tax complaint. The import solution is not responsible for, and UKG is not liable for, ensuring tax compliancy.
10. Except for local PSD codes, Local Residential taxes are not supported other than what is handled by utilizing SmartTax. State Reciprocity agreements are also not supported (although you can import into the two 'not subject to fields'). It will be the Client's responsibility to ensure that Local Resident Taxes and State Reciprocity agreements are updated after the import process has been completed.

11. It is recommended that the Customer have a Tax Audit process to ensure that their employees, where applicable, have the proper Local Resident Tax and State Reciprocity agreement configurations. BI Reports and the UKG Pro Tax Reconciliation Tool can be used for this purpose.
